

"A warm and cheerful welcome on the phone gives your customer security and confidence."

— call — **ATTENDANT**

Give your company the image it deserves!

The first impression a (potential) customer remembers is the way in which you welcome them and refer them to the right conversation partner. Use the waiting time to describe your activities / services, and play appropriate music on hold that matches your company profile. Choose a warm, positive voice that convinces your customer that your firm is the right choice. Refer the customer to your website, provide your opening hours and holidays, or point to your free company car park or nearby public garage.

The customer must feel at home, from the first contact!

This is how the Call Attendant works:

- Voice actors provide the best quality and the clearest pronunciation for all your messages, in any desired language (see website for samples)
- Copywriters write the sharpest texts that suit your company (translations also possible)
- Our large database of copyright free music-on-hold is at your disposal
- Would you like a personalized company logo in audio form? Inquire about our AudioLogo!

Specifications and appliances:

- Messages can be played on classic PBX-systems
- Messages can be played on VoIP systems. These often work with Text 2 Speech, that generates a robotic voice full of errors in language and pronunciation. We work with voice actors that speak correctly and in their native tongue.
- Our installers ensure a flawless installation of your messages
